Carolyn

Good afternoon. Per our discussion, please find attached the laboratory analytical report, third party validation report, and draft table summarizing the analytical results of the indoor air sampling event conducted at the above referenced facility on December 4, 2019. I have also attached a draft map displaying the sampling locations and sample ID's. The legend states proposed sampling locations but they are indeed the sampling locations that were deployed in the field. The work activities were completed in accordance with the emails scope of work outlined in the November 29, 2018 email sent to the EPA. All of the indoor air samples exhibited concentrations less than the RCG Commercial/Industrial indoor Air Screening Levels.

Please contact us with questions or if you need anything else.

Sincerely,

Bradley E. Gentry, LPG
